Australian Company Launches AISOF, a Global Assurance Scheme That Certifies How Organisations Govern Artificial Intelligence

Seven evidence-first frameworks covering organisational AI governance, product assurance and five regulated sectors. Outcomes are decided by Approved AISOF Assessors, never by the organisation itself.

SYDNEY, AUSTRALIA, 25 September 2026. Web Dance Pty. Ltd today announced the public launch of AISOF®, the AI Integrity and Secure Operations Frameworks, a family of seven assurance frameworks that organisations and product makers can be independently assessed against. The scheme is developed, owned and issued in Australia, and its requirements are written to apply in any country of operation.

AISOF enters a market where AI adoption has raced ahead of the ability to govern it. Research published by McKinsey in November 2025 found that 88 percent of organisations regularly use AI in at least one business function, with 72 percent reporting use of generative AI. Almost none can independently demonstrate how those systems are controlled, or produce evidence that would satisfy a board, a buyer or a regulator asking the question.

> "Every organisation now says its AI is responsible. Almost none of them can prove it," said a spokesperson for Web Dance Pty. Ltd. "A policy document written internally and checked by nobody is not evidence. AISOF exists so that a board, a buyer, an insurer or a regulator can be given something verifiable instead of an assurance."

Seven frameworks, two tracks

AISOF-3300 assesses how an entire organisation governs AI across its estate, with awards at Bronze, Silver and Gold. AISOF-3100 assesses a single named product or service, rated from one to five stars under scheme rules. Five sector frameworks address domains where AI failure carries the highest consequence: AISOF-3350 automotive, AISOF-3360 healthcare, AISOF-3370 finance, AISOF-3380 defence systems, and AISOF-3390 education.

Every requirement in the scheme is paired with how conformance must be demonstrated, through observed practice, measured operation or verifiable record. Outcomes are determined by Approved AISOF Assessors operating under scheme impartiality rules. Detailed scoring

methodology and assessor check catalogues are held as trade secrets of the scheme, which keeps assessment fair and difficult to game.

> "The hard part of building this was never writing requirements," the spokesperson said. "It was knowing what has to be interrogated before anyone can responsibly call an AI system safe. The model, the data behind it, the product it sits inside, and the organisation operating it. A failure at any one of those defeats controls at all the others."

Built for global application

AISOF requirements are jurisdiction neutral. They apply to organisations and product makers regardless of country of operation, including companies with no Australian presence. The scheme does not replace regulators and does not confer legal immunity. Organisations remain responsible for meeting local privacy and sector law in every market where they operate.

The launch follows the Australian Government's announcement in July 2026 that it intends to legislate Australian Standards for AI, with enabling legislation planned for early 2027.

Supporting platform

Alongside the scheme, Web Dance operates a software platform at webdance.com.au providing role based AI training with verifiable credentials, AI usage policy generation, incident response planning for both organisations and products, and AI model certification. The tools are voluntary and map to the artefacts the frameworks expect at assessment. Every credential issued carries a public identifier that anyone can verify.

Availability

The full framework catalogue is published at aisof.org. Organisations can request assessment packs at app.webdance.com.au/aisof. Applications are open for organisations seeking assessment and for firms interested in becoming Approved AISOF Assessors.

About AISOF

AISOF, the AI Integrity and Secure Operations Frameworks, is a family of seven evidence-first framework standards for AI assurance, covering organisational AI governance, general product assurance, and five sector specific tracks. Conformance is determined by Approved AISOF Assessors under scheme rules. AISOF is a registered trademark of Web Dance Pty. Ltd, registered with IP Australia. aisof.org

About Web Dance Pty. Ltd

Web Dance Pty. Ltd is an Australian technology company based in Sydney, New South Wales, registered with ASIC under ACN 666 082 079 and ABN 50 666 082 079. Web Dance is the proprietor and registered trademark owner of AISOF and the issuer of the scheme, and operates a software platform providing AI training, governance tooling and model certification. webdance.com.au
